Office Action Summary

Art Unit: 2834

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-4, 6, 7, 10-31 and 43-54, drawn to a piezo electric motor, classified in class 310, subclass 323.02.
- II. Claims 32-42, drawn to a method of driving a micro motor, classified in class 310, subclass 317.

The inventions are distinct, each from the other because:

Inventions Group I and Group II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the piezo electric motor can be operated without variation of the rise and fall times. Also, the method steps of Group II could be used with non piezo electric motors, e.g. magnetostrictive plates could be substituted for the piezoelectric elements.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
